

CLAIMS

We claim:

- 1 1. A system comprising:
 - 2 a multifunctional portable base station; and
 - 3 a limited function access device that interacts with the multifunctional portable base station.
- 1
- 1 2. The system as set forth in claim 1, wherein the multifunctional portable base station is selected from the group consisting of a digital wallet, a personal digital assistant, a personal computer, a web-enabled kiosk, or a wireless communication device.
- 1
- 1 3. The system as set forth in claim 1, wherein a function of the multifunctional portable base station is selected from the group consisting of to communicate with the limited function access device, to communicate with a remote device, or to act as a transactional terminal between the remote device and the limited function access device.
- 1
- 1 4. The system as set forth in claim 3, wherein the remote device is selected from the group consisting of a point of sale device, a transaction privacy clearing house, a home computer system, or a digital television.
- 1

1 5. The system as set forth in claim 1, wherein the device further comprises a
2 communication channel between the multifunctional portable base station and
3 the limited function access device.

1

1 6. The system as set forth in claim 5, wherein the communication channel
2 station comprises a wireless communication link to the limited function access
3 device.

1

1 7. The system as set forth in claim 1, wherein the limited function access device
2 comprises a chip affixed to a group consisting of a user, a pen, a wrist watch, a
3 belt, a card, or a purse.

1

1 8. The system as set forth in claim 1, wherein the limited function access device
2 comprises an identifier possessing unique identifying information associated
3 with a user, the unique identifying information associated with the user is not
4 released outside the limited function access device.

1

1 9. The system as set forth in claim 8, wherein the identifier comprises a
2 biometric analysis device to validate an identity of a user.

1

1 10. The system as set forth in claim 1, wherein the limited function access
2 device is physically separate from the base station.

1

1 11. A method comprising:

2 exchanging a transaction between a multifunctional portable base station
3 and a limited access device.

1

1 12. The method of claim 11, further comprising:

2 establishing wireless communications between the multifunctional
3 portable base station and the limited access device.

1

1 13. The method of claim 11, wherein the transaction is selected from the group
2 consisting of exchanging information between the multifunctional portable base
3 station and the limited access device, enabling the limited function access
4 device to have wireless access to services on the multifunction portable base
5 station, enabling the limited function access device to have wireless access to
6 information on the multifunction portable base station, enabling the
7 multifunction portable base station to have wireless access to information on
8 the limited function access device, or enabling the multifunction portable base
9 station to have wireless access to services on the limited function access device.

1

1 14. The method of claim 11, further comprising:

2 authenticating the access rights of a user to a restricted locality.

1

1 15. The method of claim 11, further comprising:

2 establishing a secure link between the limited function access device and
3 the multifunction portable base station to allow an exchange of confidential
4 information of a user between the multifunction portable base station and the
5 limited function access device.

1

- 1 16. The method of claim 11, further comprising:
2 associating unique identifying information with the multifunction
3 portable base station to protect an identity of a user.
1
1 17. The method of claim 11, further comprising:
2 populating methods which are independent of location.
1
1 18. The method of claim 11, wherein the exchanging the transaction between
2 the multifunctional portable base station and the limited access device
3 occurs automatically.
1
1 19. The method of claim 12, wherein the establishing wireless communications
2 between the multifunctional portable base station and the limited access device
3 occurs automatically.
